## STATUS REPORT

### **-Describing the choosing features:**

1- The ability of choosing a product:

Easy to implement, I added this feature but without adding the product to the shopping cart because it needs php.

2-Showing a map of where to find the shop:

I took a screenshot of the map of Tripoli, my idea was to use google map and let the user find the shop from his location but I just put a photo.

3-Adding the shopping cart:

I wanted to implement it at the previous assignment so I added it in this one.

4-Reservation confirmation & showing the bill:

It is important because the existents of the shopping cart, it is not difficult.

### **-The unchosen features:**

1-Gathering the selected product in the cart:

It needs php i guess, it is difficult to be implemented for me.

2-Admin can control the items:

I didn't understand or even imagine the idea of this term.

3- Changing the bill when you choose a number of items:

This feature depends on the ability of adding a product is not available so it can't be implemented, It needs php and maybe with another language.

4-The user can see the feedback of other users:

My website in this moment is not dynamic.
